

ActiveCharts is a powerful charting solution for online trading platforms, financial portals and websites. It is aimed at expanding the functionality of using the market data in the existing trading platforms. Delivered as an ActiveX component, ActiveCharts can be easily integrated into any software or a website. The product not only has the visual components but also a very powerful data server platform in the backend that is ready to serve large number of customers. Its workspace environment helps the trader to view multiple charts with one click.
